Brief Report on Project

I have done project on Registration Form. For this project, I have taken some requirements and features. This project is completed using HTML and CSS language. According to the project objectives I have included that user interaction design using form outline tag.

To design HTML page, I have used some HTML tags such as html tag, body, header, title, label, select, option, sup, button, paragraph, anchor tags, h1 tag, radio etc. This will give the structure to the HTML page or Project. This is basic to design webpage.

To attract the customer, I have used CSS tags which provide attractive color, different types of design styles like fonts, border, margin, padding etc. These are attributes are used in CSS.

This registration form is created by dynamic and user friendly using HTML and CSS and it was created by stylished and responsive design. What you are given to me requirements and features, I used that all requirement and features in this project.
