BRIEF DOCUMENT ON PROJECT

I have done project on Pricing Landing Page. For this project, I have taken Scooter as a fictional product or service. This project is completed using HTML, CSS and Javascript language. According to the project objectives, I have included some content in this project such as dynamic elements, interactive pricing toggles or hover effects.

To design HTML page, I have used some HTML tags such as html tag, body, header, nav, div, section, button, ul(unordered list), paragraph, anchor tags, image tags, footer tag etc. This will give the structure to the HTML page or Project. This is basic to design webpage.

To attract the customer, I have used CSS tags which provide attractive color, different types of design etc.

To get the dynamic webpage, I have used javascript in my project.
